ASCII Table

ASCII stands for American Standard Code for Information Interchange. Computers can only understand numbers, so an ASCII code is the numerical represent a character such as 'a' or '@' or an action of some sort. ASCII was developed a long time ago and now the non-printing characters are rarely used for their orig purpose. Below is the ASCII character table and this includes descriptions of the first 32 non-printing characters. ASCII was actually designed for use with telet and so the descriptions are somewhat obscure. If someone says they want your CV however in ASCII format, all this means is they want 'plain' text with no forr such as tabs, bold or underscoring - the raw format that any computer can understand. This is usually so they can easily import the file into their own applicatio without issues. Notepad.exe creates ASCII text, or in MS Word you can save a file as 'text only'

| Dec | Hx | Oct | Char | Dec | Hx | Oct | Html | Chr | Dec | Hx | Oct | Html | Chr | Dec | Hx | Oct | Html | Chr |
|-----|----|-----|------------------------------------|-----|----|-----|-------|--------------|-----|----|-----|-------|----------|-----|----|-----|--------|------------|
